

The image is a screenshot of a web browser displaying the Programiz JavaScript Online Compiler. The browser's address bar shows the URL 'programiz.com/javascript/online-compiler/'. The page header includes the Programiz logo and the text 'JavaScript Online Compiler', along with a 'Programiz PRO' button. The main interface is divided into two primary sections: a code editor on the left and an output console on the right. The code editor, titled 'main.js', contains a JavaScript script that prompts the user to enter a year, checks if it's a valid number, and then determines if it's a leap year based on specific divisibility rules. The output console shows the execution results: 'Enter a year:2024', '2024 is a leap year.', and a success message '=== Code Execution Successful ==='. On the right side of the interface, there is a red sidebar with an Adobe Acrobat advertisement and a 'Set Password' dialog box. The bottom of the image shows a Windows taskbar with various application icons and the system clock indicating the time is 13:36 on 13-04-2025.
